

From October 16th to October 30th, **students of group 519 conducted a series of presentations on topical issues of infectious diseases.** During the presentations, key issues of epidemiology, pathogenesis and diagnosis of hepatitis B, C, D, and HIV infection were discussed. The lecturer of the group, Tatiana Ivakhnyuk, noted that

each prepared presentation is not only interesting scientific information, but interesting facts about the spread of hepatitis and HIV infection, clinical cases of these infections, peculiarities of prevention and treatment in Africa.

During the presentations, the questions of modern treatment of these diseases were raised. Students shared information from the scientific literature on promising areas in the development of new drugs for treatment and existing methods.

We wish the students further success in their studies and professional growth.
